# Faking out XHR and Timer Calls

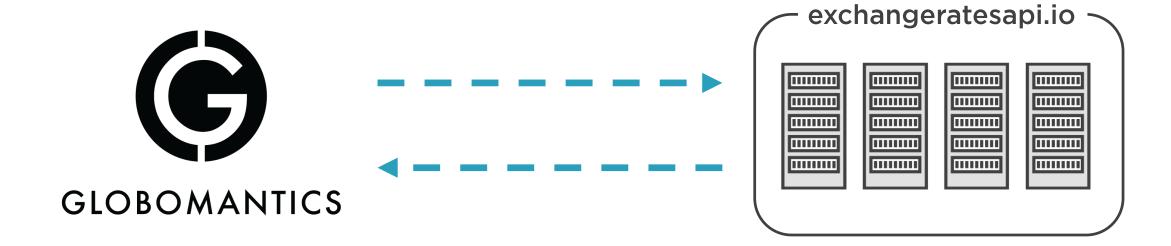

Nathan Taylor
SOFTWARE ENGINEER
@taylonr taylonr.com

# Problem: Making External API Calls

```
var settings = {
  url: 'https://exchangeratesapi.io/api/latest?base=USD',
  method: 'GET'
};
$.ajax(settings).done(...)
```

Currency Conversion

# Running Tests in the Browser

# Making a Fake Request

```
var settings = {
  url: 'https://exchangeratesapi.io/api/latest?base=USD',
  method: 'GET'
};
$.ajax(settings).done(...)
```

XMLHttpRequest

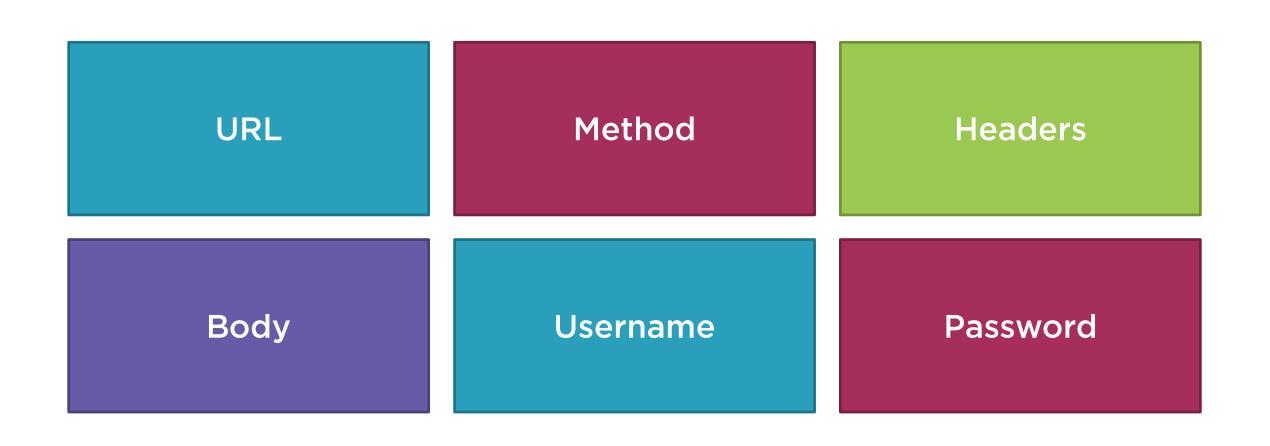

## Creating a Fake Request

sinon.useFakeXMLHttpRequest();

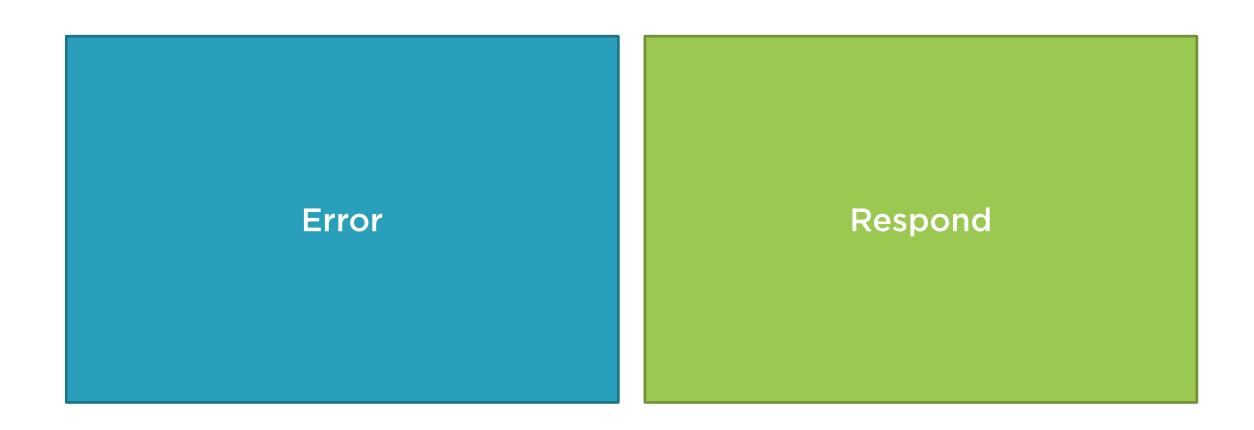

#### Capturing Requests

```
xhr.onCreate = (req) => {
    requests.push(req);
};
```

#### FakeXMLHttpRequest Properties

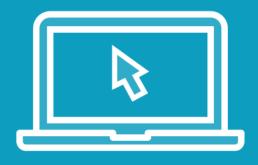

# Request Actions

#### Responding to a Request

```
request.respond(200, {'Content-Type': 'application/json'},
'{title: "Don\'t Waste Your Life"}');
request.setStatus(200);
request.setResponseHeaders({'Content-Type':
'application/json'});
request.setResponseBody('{title: "Don\'t Waste Your
Life"}');
request.respond();
```

## Demo

Faking out XHR

Demo: Fake XHR

Faking a Server

#### Multiple Requests

## Required Actions for Requests

# Creating a Server

```
sinon.createFakeServer();
```

#### Setting up Responses

#### respondWith Options

(method, url, response)

(urlRegEx, response)

(method, urlRegEx, response)

(response)

#### Responding to Requests

```
server.respondWith('https://exchangeratesapi.io/api/latest?
base=USD', response);

getPrices(10, 'AUD', callback);

server.respond();
```

#### Configuring the Server

```
const server = sinon.createFakeServer({
    autoRespond: true
});
```

#### Configuring the Server

```
const server = sinon.createFakeServer({
   autoRespond: true
});
const server = sinon.createFakeServer({
   autoRespondAfter: 500
});
```

# Don't forget to .restore()

Faking out XHR is simpler

# Faking a Date

#### Checking a Date

```
return controller.create(req, res).then(() => {
    expect(userCreate.calledWith(sinon.match({
        customerSince: sinon.match.date
    }))).to.eql(true);
});
```

#### Checking a Date

```
return controller.create(req, res).then(() => {
    expect(userCreate.calledWith(sinon.match({
        customerSince: sinon.match.date
    }))).to.eql(true);
});
```

Time to execute code can vary

# Creating a Fake Timer

```
const timer = sinon.useFakeTimers();
```

#### Creating a Fake Timer

```
const timer = sinon.useFakeTimers();
console.log(new Date()); //1970-01-01T00:00:00.000Z
```

#### Creating a Specific Fake Timer

```
const timer = sinon.useFakeTimers(new Date(2015, 10, 1));
console.log(new Date()); //2015-11-01T05:00:00.000Z
```

#### Advancing the Timer

```
timer.tick('01:20');
console.log(new Date()); //2015-11-01T05:01:20.000Z
```

# Don't forget .restore()

## Demo: Cleaning up Date Verification

# Coming Up

# You've learned all the doubles and fakes!

Sinon sandboxes
